Subject: First figures of Wilcox in new format

Good Morning All,

Included in this email are four figures with the new site layout and a new aerial photo I found using Global Mapper. I think the new aerial is crisper and not as dark as the other one. It makes the features we are putting on much clearer. These figures are set to a 11 by 17 sheet of paper. I'll be sending over all the others, but I wanted to get these to you right away. I have PDF versions as well, but these jpegs are not as fuzzy like the PDF versions.

George had a comment in an email regarding thick soil for CPT holes.

There may be pockets of really thick soil (greater than 15 feet) but it would be sporadic.

In the figure with the site wide soil thickness, you'll notice I changed the color scale a little. I got away from the three shades of color that were too close to each other. What would be the minimum soil thickness needed to justify a CPT hole? I can break out the color contour intervals some more, but then it looks really blocky. I will do it if you want to see areas that are say 12 to 15 feet, but I need to stay with a contour interval that is at least 2-3 feet wide or the whole figure turns into what I can only describe as tie-dyed.

Let me know what you think of the figures. I will finish the rest off using the new photograph and color scales. I am also exporting these as georeferenced TIFF files that should be what Jon needs.

Katrina and Tom, If there is something particular you'd like me to put together for your meeting.. just let me know.

Beth
